

## Rugged Metal Keypads with ASCII Output, USB

OIT has enhanced the popular MVP series of Rugged Keypads by integrating a programmable microcontroller to the 3x4 and 4x4 keypads. Each key position can be programmed to output any ASCII character. Plug and play, no drivers to install.

The keypads are sealed to NEMA 4 and IP65 standards.

The 3x4 is available with the back light option.

Please see the available key options at [www.oitkeypad.com](http://www.oitkeypad.com).
